Faculty positions in Design

Industrial Design

The School of Design is looking for a person who shares our spirit of inquiry through teaching, research, and professional experience to join our community of faculty and students. While we welcome the contribution made possible by diverse experience and areas of expertise, we are seeking particular teaching and research capabilities in design practice, current product design and development methods, materials and processes for production and manufacturing, computer-aided design software and rapid prototyping. In addition, comfort with traditional visualization processes and working in an interdisciplinary environment is essential, as is the situating of design in a human centered context.

Relevant qualifications may be demonstrated through a proven track record of solid professional and/or teaching and research experience. The individual should be able to teach at all levels of the undergraduate curriculum, with potential for research and professional activities at the rank of Assistant or Associate Professor.

This tenure-track appointment and salary are commensurate with qualifications at the rank of Assistant or Associate Professor, depending on qualifications. We are now entertaining applications with an initial review beginning after March 1, 2007. This position will remain open until successfully filled.

If you are interested in this position please submit a statement of your teaching, research, and/or professional activities, with reasons for wanting to join our faculty, a current resume or curriculum vitae, three reference names with contact information, and samples of both your work and your students' work on CD/DVD, Web, and/or in printed format.

Mail your package to:
Bruce Hanington, Associate Professor
Chair, Industrial Design Faculty Search Committee
School of Design, MMCH 110
Carnegie Mellon University
Pittsburgh, PA 15213-3890

Electronic submissions or inquiries via email to: hanington@cmu.edu

The School of Design at Carnegie Mellon educates students in the art of conceiving, planning, and making products that are useful in supporting the activities of human beings in all areas of experience. On the undergraduate level, we offer a BFA in Industrial Design and in Communication Design. On the graduate level, we offer a Master of Design in Interaction Design, and in Communication Planning and Information Design, as well as a Ph.D. in Design. The School of Design is comprised of 16 full-time and 10 adjunct faculty, 8 staff, 175 undergraduates, 35 masters and 6 Ph.D. students. For more information, visit us at www.design.cmu.edu. Carnegie Mellon University is an affirmative action/equal opportunity employer.
